- $a. \mathcal{L}^{c}$, el complemento de \mathcal{L} .
- b. \mathcal{L}^* , la clausura de Kleene de \mathcal{L} .
- c. \mathcal{L}^{r} , la reversa de \mathcal{L} .
- $d. \ \operatorname{Ini}(\mathcal{L}) = \{\alpha \ | \ \exists \beta \ \text{tal que} \ \alpha\beta \in \mathcal{L} \}, \ \text{los prefijos de} \ \mathcal{L}$
- $e. \ \operatorname{Fin}(\mathcal{L}) = \{\alpha \mid \exists \gamma \text{ tal que } \gamma \alpha \in \mathcal{L}\}, \ \operatorname{los sufijos de} \ \mathcal{L}.$
- $\textit{f. } Sub(\mathcal{L}) = \{\alpha \mid \exists (\beta, \gamma) \text{ tales que } \gamma \alpha \beta \in \mathcal{L}\}, \text{ las subcadenas de } \mathcal{L}.$
- $g.\ \operatorname{Max}(\mathcal{L}) = \{\alpha \in \mathcal{L} \mid \forall \omega \in \Sigma^+, \alpha\omega \not\in \mathcal{L}\}, \ \text{las cadenas maximales de } \mathcal{L}.$
- $h.\ \mathrm{M\acute{in}}(\mathcal{L})=\{\alpha\in\mathcal{L}\ |\ \mathrm{ning\acute{u}n}\ \mathrm{prefijo}\ \mathrm{propio}\ \mathrm{de}\ \alpha\ \mathrm{pertenece}\ \mathrm{a}\ \mathcal{L}\},\ \mathrm{las}\ \mathrm{cadenas}\ \mathrm{minimales}\ \mathrm{de}$ $\mathcal{L}. \text{ Es decir, } \operatorname{Min}(\mathcal{L}) = \{\alpha \in \mathcal{L} \mid \nexists(\omega_1, \omega_2) \text{ tales que } \alpha = \omega_1 \omega_2 \wedge \omega_1 \in \mathcal{L} \wedge \omega_2 \neq \lambda\}.$
- $i. \ \mathcal{L}_T = \{\alpha \in \Sigma^* \ | \ \exists (\omega_1 \in \mathcal{L}, \omega_2 \in \Sigma^*) \ \text{tales que} \ \alpha = \omega_1 \omega_2 \} = \mathcal{L}.\Sigma^*$

a) Midebe ser determistro. La que investo la estada finales con mo frabe b) M1 = @ A A dise que en la formanos ropedo, en AFND c) have gue M prude son A FD or A FND. M'= M con la fleder investidor y fuoliz conyon

investidor. Consumer M' en AFND

- 6. **Substrings** (Sub(\mathcal{L})): Combine prefix and suffix operations
- 7. Maximal strings ($Máx(\mathcal{L})$): Remove transitions from accept states (ensure no extensions).
- 8. **Minimal strings (** $ext{Min}(\mathcal{L})$ **):** Accept states are those with no path to another accept state via non-

 $J_{1} - J_{2} = J_{1} \cap A_{2} = J_{1} \cup J_{2} = J_{1} \cup J_{2}$

- a. Determinismo: $\left((q, \alpha) \stackrel{*}{\vdash} (r, \lambda) \land (q, \alpha) \stackrel{*}{\vdash} (s, \lambda) \right) \Longrightarrow r = s$
- $b. \ \ \textit{Concatenaci\'on}: \left((q,\alpha) \overset{*}{\vdash} (q_1,\lambda) \land (q_1,\beta) \overset{*}{\vdash} (r,\lambda) \right) \Longrightarrow (q,\alpha\beta) \overset{*}{\vdash} (r,\lambda)$
- c. Siempre toma un estado: $(q, \alpha\beta) \stackrel{\cdot}{\vdash} (r, \lambda) \Longrightarrow \exists q_1 \Big((q, \alpha) \stackrel{\cdot}{\vdash} (q_1, \lambda) \land (q_1, \beta) \stackrel{\cdot}{\vdash} (r, \lambda) \Big)$
- d. Linealidad: $(q, \alpha) \stackrel{n}{\vdash} (r, \lambda) \iff |\alpha| = n$
- e. Invariancia: $(q, \alpha) \stackrel{*}{\vdash} (q, \lambda) \Longrightarrow \forall i \in \mathbb{N} \Big((q, \alpha^i) \stackrel{*}{\vdash} (q, \lambda) \Big)$
